Measuring impact

Because Receipto is a digital app, we can collect various amount of data. This includes how many receipts have been made, how much money has been spent, how many users are using the app, the total amount of CO_2 used by the users, the total amount of CO_2 saved by the users actions, the most popular items, categories and shops amongst the users, how much CO_2 the users use getting to the shop if its by car.

A way you could measue impact with this data is seeing how much paper has not been printed due to Receipto. You could also see how many are from specific stores, which would allow us to see the percentage decrease in their receipt prints.

The list goes on, making Receipto not only a great app that incentivises eco-friendly practices and budget management but also a great data analytical tool that can show incredible insight into how the users shop, where the most CO_2 is being used and how the users have been taking steps in the right direction.
